

INCLUSIVE HEALTHCARE

Make sure that important medical information reaches everyone – with sign language translations from SWISS TXT.

The issue: In Switzerland around **a million people are hard of hearing and between 20,000 and 30,000 are deaf.**

These people often struggle to access key medical information if it is not available in sign language and with subtitles. This leads to an information gap and can compromise medical care.

This applies e.g. to information sheets and informed consent forms.

Our solution: SWISS TXT translates your texts and videos into sign language and creates subtitles. Our professional sign language interpreters work in their native language, which guarantees top quality.

Your benefits

- ✓ – **Vital information:** Providing information in sign language is crucial to the accessibility of medical content.
- ✓ – **Improved patient satisfaction:** Accessible information increases satisfaction and trust in your patients who are deaf or hard of hearing.
- ✓ – **Higher quality of care:** Clear and understandable information is essential for optimal medical care and reduces the risk of misunderstandings and treatment errors.
- ✓ – **Image and corporate social responsibility:** By integrating sign language translations you are showing your commitment to inclusion and accessibility and bolstering your image as a responsible healthcare facility.
